

Now offering access control to your customers is easy. VertX CS is seamlessly integrated within the central station automation software that you already have.

- ▶ Fully featured card/reader access control
- ▶ No PC or server required
- ▶ No software required
- ▶ No specialized training required

ACCESS opportunity.

Now VertX CS makes it easy for security alarm dealers to offer access control to their customers.

VertX™ CS is the first family of access controllers designed specifically for alarm dealers for direct connection to central stations. Because it was designed with the central station in mind, VertX CS works with software from leading central station automation providers, including Bold Technologies, DICE, GE MAS, Micro Key, and Patriot Systems.

Fully featured, flexible and easy to install, VertX CS is the entry control solution—from a single-door retail shop to a large enterprise. With VertX CS, alarm dealers can realize central station managed access control and provide installation and recurring support services, just like alarm/intrusion systems are installed and managed by your central station.

All from HID Global, the world's most trusted brand in access control.

Customer Location

Plug and Play Installation

- No additional software needed to implement-added modules only
- Industry-standard connections
- Connect from one to 64 access control readers to VertX CS
- Add modules of 16 inputs and/or 12 outputs

Access Control Made Simple

- Fully featured access control system – not just a hook up to access control readers through an alarm panel
- Compatible with all industry standard access control readers
- Eliminates the need for a separate access control system

VertX CS integrates access control with existing central station monitoring services.

Today, approximately 85 percent of alarm monitoring customers do not currently have electronic access control. VertX CS is the perfect product for alarm dealers to bring access control to their customers without installing an end-user dedicated PC, selling the customer specialized software, or training the customer in access control administration.

The opportunity starts with monitored alarm customers. An easy add-on to any monitored alarm system, providing an upgrade to access control for existing alarm customers, with management and administration that can be shared, or be exclusive to, the central station, the installing dealer, or to the end user.

For RFP responses and existing end-user accounts, VertX CS security contractors have a great cost advantage. Any central station based proposal instantly has added value. For the security contractor, this enables and creates more end user services to offer your customer.

Behind every VertX CS access controller stands HID's industry leading-service and support.

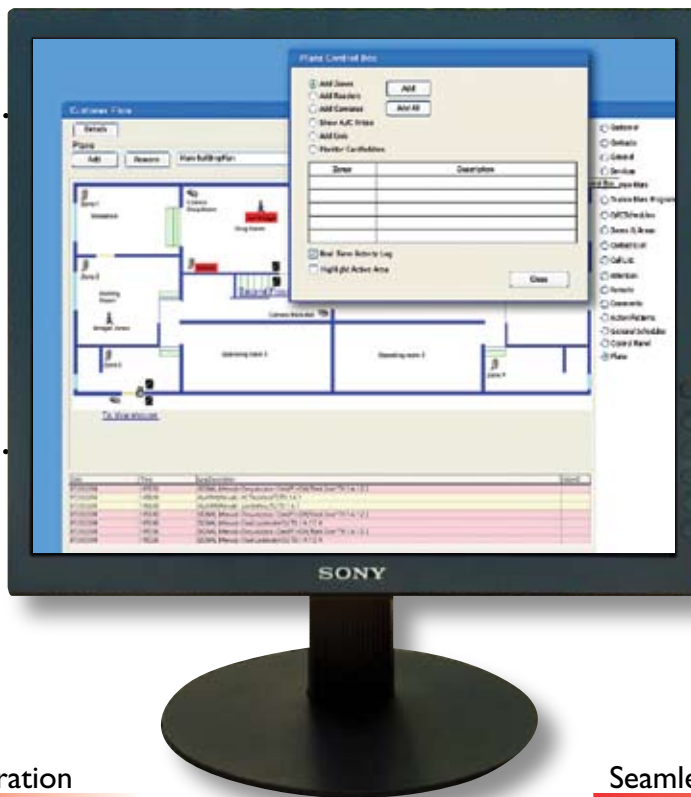

Central Station Operations

Easy to Configure

- On-board installation tools
- Majority of configuration information automatically pulled from central station software
- As easy to configure as an alarm system

Designed for Central Stations

- VertX CS is managed from the same, existing GUI that alarms are managed from
- Integrates plug and play compatibility with central station software from Bold Technologies, DICE, GE MAS, Micro Key and Patriot Systems
- Provides a single point of monitoring and management for intrusion and access control

Works With:

GE MAS

Quick Integration

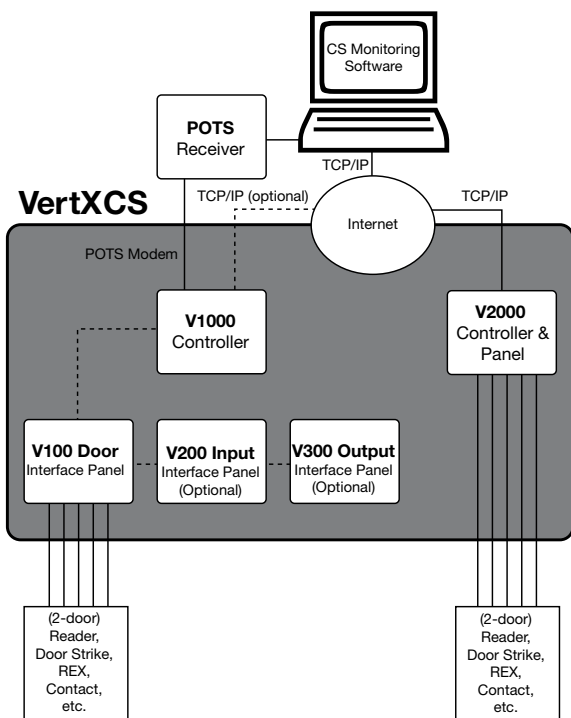

- Gets monitored site up and running in no time
- Installs similarly to an alarm system
- Easy to maintain – just call the central station

Seamless Operation

- Operators use same screens for access control, intrusion and fire alarm monitoring
- Operators see access information alongside intrusion alarms, reducing false alarms
- Uses back office for access control management, service reports, maintenance and billing history

VertX CS Family of Access Controllers

VertX Model	Description	Function
V1000	Access Controller	Host interface and access control processing for up to 32 door/reader interface (V100), input monitor (V200), or output control (V300) units.
V100	Door/Reader Interface (Connects to V1000)	Connects two access control card readers via Wiegand or Clock-and-Data interface controlling one or two doors.
V200	Input Monitor Interface (Connects to V1000)	Alarm input processing for up to 16 supervised input circuits, monitors and reports normal, off-normal, and tamper states.
V300	Output Control Interface (Connects to V1000)	Output control processing for up to 12 devices, contains 12 latching Form-C relays connecting up to 12 devices controllable by simple contact closures.
V2000	Reader Interface/Access Controller	Host interface and access control processing for two readers/doors. Ideal for small installations.

Genuine HID Value for Central Stations

Quality

- Developed, tested and manufactured in ISO-certified facilities
- From market leader HID, the world's most trusted brand for high quality access control cards and readers

Partnership

- Developed in collaboration with central station monitoring host software leaders Bold, DICE, GE MAS, Micro Key and Patriot Systems
- VertX API provided free of charge to qualified application developers

Service

- Dedicated application engineering and technical support staff
- Available through distribution channels worldwide
- Free training for alarm dealers and central station system integrators

Value

- Affordable purchase price
- Easy to buy, sell, install, and maintain
- Eliminates the need for a separate access control system
- Generates opportunity for incremental services to existing customer

ACCESS experience.
