

4G Lite Suite: Extensible, Scalable, Flexible

About L-1 Identity Solutions Enterprise Access Solutions

With over 450,000 readers deployed in over 90 countries, the Enterprise Access Division of L-1 protects and secures identities and assets by helping customers address demanding access control and identity authentication requirements with innovative and reliable systems.

Our Advantage:

- Scalable solution, from a single door installation to multiple locations
- Leverages same embedded device platform as the 4G fingerprint readers
- Easy administration with SecureAdminLite™
- Designed for mixed biometric and non-biometric reader environments
- Smallest biometric form-factor in the 4G product lineup

The physical access control segment of the security industry is still growing and technology keeps evolving. For that reason, the cost associated with biometric devices has been an issue for many companies considering a physical access control solution, which incorporates the latest advancements in biometrics.

Bioscrypt (The Enterprise Access Division of L-1 Identity Solutions) has been at the technological forefront of the biometric physical access control industry for over twenty years, which has allowed us to concentrate on delivering products that can actually cater to the needs of the customer. We understand that not all businesses have the same expectations when it comes to incorporating a biometric solution into their security system and that's why our product portfolio has evolved to make scalability a key feature of our offering.

As a result of our relentless R&D, the ultimate solution for scalable installations was developed. The 4G Lite suite, was engineered as a flexible solution that could be deployed in both large and small locations. Ideal for operations in emerging markets such as India and Latin America and businesses looking for a solution that can grow with them, the 4G Lite suite can be implemented in very small business environments and scaled up to span across multiple locations.

The often high-paced business environment of today requires few people to wear many different hats, that's why a physical control access solution also needs to be simple to manage. Our proprietary software SecureAdminLite™ provides ease of use for the management of your users (employees) and does not have a steep learning curve associated to it.

The 4G Lite suite offers the unparalleled flexibility demanded by businesses and various organizations, it is synonymous with ease of use and it also takes advantage of the high quality standards found in our top-of-the-line products, at a price point that makes sense for your project.

Additional Security for Extra Peace of Mind

With the 4G SecureControl™ device, the module is placed on the secure side of the door and adds security for single door access locations. Ideal for small deployments, the SecureControl™ module acts as an access control panel, communicating with the 4G devices via synchronized and encrypted RS-485 communication and can connect wirelessly to your network.

“In today’s business environment, a security solution needs to be highly scalable, while providing ease of use for the designated administrator.”

*Shiraz Kapadia
Chief Operating Officer*

Some key features for the 4G Lite suite include:

Reduced Cost of Ownership

A truly cost-effective access control solution, the 4G Lite suite delivers the smallest biometric form factor in the 4G product lineup, making it an ideal choice for single door installations or deployments operating on very strict budgets.

Using the system’s administration software (SecureAdminLite™) is very easy and eliminates the need for offsite support in the event of users being added or eliminated from the database.

The 4G Lite suite can be easily integrated into your existing non-biometric security system and managed under the same platform, creating a seamless system that can make use of your existing resources. Your system integrator will be your key partner in merging both.

A Scalable Solution

A solution that can truly grow with your business, from a single door installation to multiple office locations, the 4G Lite suite can accommodate the needs of any operation. Use the 4G V-Flex Lite™ in combination with the 4G CR-Pass™ for a mixed biometric and non-biometric environment with different layers of security throughout your facility.

High Performance

Both the 4G V-Flex Lite™ and 4G CR-Pass™ offer a great level of performance, leveraging the same embedded platform as our existing 4G fingerprint readers (**including IP 65 rating for outdoor environments**), which attests to our commitment to provide solutions that fit the needs of our customers, as opposed to a “one size fits all” approach to product development.

Small and sleek, designed to streamline installation and administration for enterprise or standalone door access control deployments.
