

# Mounting Drawing for MorphoAccess 200E / 300E

A hole in the mounting surface is necessary for the cables to pass through. The edges of this hole in the mounting surface must lie within the hatched area, both to prevent interference with the cable seal fittings and to ensure that the provided seal makes contact with the mounting surface. The hatched region on this template may also be used to ensure that the cable seal fittings do not interfere with any installed electrical junction box. See the installation manual for detailed instructions. Purchased units include an actual size mounting template.
