

# SC701HG GSM Help Point Station

This stand alone Help Point has been specifically designed to fulfil the requirements of City centres, roadsides and integrated transit systems in locations where cabling to the station is either impossible or impractical.

If a local power supply is not available, a solar power panel together with the integral batteries make for an entirely stand-alone solution via either 900MHz or 1.8GHz GSM Networks.

Its high quality extruded construction ensures a very robust vandal and weather resistant unit. Standard colour is blue, though depending upon quantity, can be supplied with the End Users own corporate colour and logo.

Two buttons are provided, one for emergency and a second for information though the latter may be configured to give a simple voice message.

Extremely high quality speech in the noisiest of locations is possible.

- Wall or pedestal mounting
- Solar power option
- Optional Inductive Loop and Strobe outputs
- Recorded messages
- Hands free speech
- Excellent speech quality in extremely high ambient noise conditions
- Remote diagnostics
- Tamper alarm with automatic dial-up reporting
- Optional Public Address facility
- Local diagnostics/configuration via infra-red port and palm pilot
- Optional output relays to activate a light, camera etc.
- Also available with PSTN or ISDN telephone lines

## Technical Data

- Material: 5mm Extruded aluminium and finished with two pack polyurethane enamel  
Facia is 2.5mm stainless steel
- Dimensions (mm): Wall: (H) 530 x (W) 210 x (D) 130 Weight: 11 Kg  
Pedestal: (H) 1475 x (W) 210 x (D) 130 + Base 445mm Weight: 50Kg
- Power Supply: 230VAC to 9VDC Plug Pack;  
Solar panel 20w Internal Battery 6V 10AH
- Rating: IP65 Weather resistant
