

The SR700 series of Help Points has been specifically designed with a robust metal construction, making them both vandal and weather resistant as well as aesthetically pleasing. They are ideal for use in City Centres, transit scheme locations, Park & Rides, University campuses etc.

Standard colours are white with a blue surround though it may be supplied with the end user's own corporate logo and colours.

The SR701HG has an integral dual band GSM modem for connection to 900MHz or 1.8GHz GSM networks. The only cabling required is to the suitably sited antenna and to connect a local power supply.

An entirely stand-alone unit with absolutely no cables whatsoever can be achieved by mounting on a pole and connecting a suitable solar panel. Integral batteries power the unit during the hours of darkness.

This Help Point is also available in other versions suitable for connection via copper, PSTN or ISDN telephone.

Callers always speak 'Handsfree' with speech possible from up to several meters from the unit.

An optional output to an Induction Loop Amplifier for the Hearing Impaired is also available.

Options

- Single or Dual button operation
- Tamper Alarm
- Anti-nuisance call facility
- Public Address facility
- Output to Induction Loop Amplifier for the Hearing Impaired
- Output relays to activate a light, camera etc.
- Free Standing pedestal mount (SRPED/1)

Technical Data

- Material: Surround: Zintec, 16SWG Powder Coated Blue RAL5002PG
Fascia Plate: Stainless Steel 2mm Powder Coated White
- Colour: Standard or special to customer's specification
- Dimensions: Diameter: 446mm (18")
Depth: 113mm (4.5")
- Fixings: 4 x concealed back panel fixing holes accessed by removal of front panel
- Cable Entry: 1 x 25mm for top or bottom orientation
- Power Supply: 230VAC to 9VDC Plug Pack
Solar panel 20W
Internal battery 6V 10AH
