## SS801L - Fire Fighting Lift Motor Room Station

Lift  
Solutions

The SS801L is specifically designed for use as the motor room fire fighting intercom station for lifts, fully compliant to BS5588 Pt5.

Its high visibility red colour, and robust metal construction makes it ideally suited to this application. With bold white text, its purpose and operation are quite unambiguous.

The unit is enabled when the Fire Fighting switch on the associated FSAL station is acti-

vated. Speech is of exceptionally high quality and provides a 3-way conversation with the FSAL and Lift Car. 4-Way conversations are also possible to allow for a remote Fire Command Centre station to be included. Motor Room and FSAL stations operate in a press-to-talk, release-to-listen manner. Lift car operates completely hands-free.
